

In-Line Depaneling Router R2300

**Innovative design! Runs on Windows XP,
Throw away webs automatically separate from
depanelised boards as it is transferred to output
flatbelt conveyor!**

PCBAs flowing downstream from ovens or from inspection system flows into the in-line depaneling router where it is positioned and transferred to the workholding fixture. The fixture rotates clockwise to the back of the machine where it is routed whilst the depaneled PCBAs with its separated webs rotates to the front of the machine where a pick up arm transferred the depanelised boards to a flat belt conveyor. During the transfer process, the webs automatically drop into a trash bin.

Front of machine where the board is positioned, picked up and transferred.

Back of machine where routing takes place.
